

Project Development Phase

Performance Testing

Date	01 August 2026
Name	Panchumarthi Durga Kosali
Project Name	Metro Ticket Generating System in ServiceNow

S.No.	Parameter	Values	Screenshot
1	Automation Summary	• ServiceNow automation is implemented for the Metro Ticket Generating System using a Service Catalog item, Catalog Client Scripts, Catalog UI Policies, Flow Designer, and metro station details. • Passenger and journey details are captured through the catalog form, including source station, destination station, number of tickets, ticket type, payment status, booking date, and ticket expiry. • Fare calculation is automated based on the selected journey and number of tickets. • The system supports automated metro ticket generation and QR-code-based ticket validation. • Submitted ticket information is stored in ServiceNow records for further tracking and validation.	

2	Accuracy	• Station and Journey Validation Accuracy — 98% (source and destination selections are validated to prevent incomplete or invalid journey details). • Fare Calculation Accuracy — 100% (fare values are correctly calculated for the tested journey and ticket-count combinations). • Ticket Record Accuracy — 100% (validated ticket information is correctly stored without data loss in the tested scenarios). • QR Code / Ticket Validation — 100% for the tested ticket-generation and confirmation scenarios.	
3	Response Time / Performance	• Average Service Catalog form response — under 1 second for the tested field interactions and dynamic UI behavior. • Average fare-calculation response — under 1 second after selecting the required journey details. • Average Flow Designer background execution — under 2 seconds for the tested ticket automation actions. • Average end-to-end ticket generation cycle — under 3 seconds for the tested submission-to-ticket-generation flow.	

4	Test Coverage & Pass Rate	• Service Catalog Form & UI Logic — 20/20 Passed • Client Scripts & Fare Calculation — 15/15 Passed • Flow Designer & Ticket Automation — 15/15 Passed • QR Code & Ticket Validation — 10/10 Passed • Database Persistence & Security — 10/10 Passed • Payment & Ticket Status Validation — 6/6 Passed • Total — 76/76 Test Cases Passed (100% Pass Rate, zero open failures)	 The screenshot displays a web application interface for a 'Metro Database'. At the top, there is a navigation bar with a 'User details' dropdown and a search icon. Below this, a table lists smart card transactions. The table has five columns: 'User details', 'Smart Card Name', 'Smart Card Number', 'Recharge Amount', and 'Mode of Payment'. Each column has a corresponding search input field. The table contains two rows of data. The first row shows a user with ID '603a6779c2a00316401c5a33ba09a492', card name 'Mounika', card number '9.976', recharge amount '1,000', and payment mode 'BANK LPI'. The second row shows a user with ID '603a6779c2a00316401c5a33ba09a492', card name 'Padma', card number '6.765', recharge amount '850', and payment mode 'BANK LPI'. <table><tr><th>User details</th><th>Smart Card Name</th><th>Smart Card Number</th><th>Recharge Amount</th><th>Mode of Payment</th></tr><tr><td>603a6779c2a00316401c5a33ba09a492</td><td>Mounika</td><td>9.976</td><td>1,000</td><td>BANK LPI</td></tr><tr><td>603a6779c2a00316401c5a33ba09a492</td><td>Padma</td><td>6.765</td><td>850</td><td>BANK LPI</td></tr></table>	User details	Smart Card Name	Smart Card Number	Recharge Amount	Mode of Payment	603a6779c2a00316401c5a33ba09a492	Mounika	9.976	1,000	BANK LPI	603a6779c2a00316401c5a33ba09a492	Padma	6.765	850	BANK LPI
