

Acceptance Testing

UAT Execution & Report Submission

Date:	01 August 2026
Name:	Panchumarthi Durga Kosali
Project Name:	Metro Ticket Generating System in ServiceNow
Maximum Marks:	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage, defect resolutions, and validation status of the Metro Ticket Generating System in ServiceNow at the time of its release to User Acceptance Testing (UAT). The report validates the Service Catalog form, client-side logic, automated fare calculation, ticket generation, QR-code-based ticket validation, payment status handling, and backend data persistence before final deployment.

2. Defect Analysis

This report tracks software defects identified during UAT execution. Defects are categorized by resolution type and operational severity level, from Severity 1 (Critical) to Severity 4 (Low/Cosmetic).

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	1	1	1	3
Duplicate	0	0	1	0	1
External	0	1	0	1	2
Fixed	2	4	5	4	15
Not Reproduced	0	0	1	0	1
Skipped	0	0	0	1	1
Won't Fix	0	0	1	1	2
Total	2	6	9	8	25

3. Test Case Analysis

This section tracks the total test-case execution volume across the core functional areas of the Metro Ticket Generating System to measure system compliance.

Section	Total Cases	Not Tested	Fail	Pass
Service Catalog Form & UI Logic	20	0	0	20
Client Scripts & Fare Calculation	15	0	0	15
Flow Designer & Ticket Automation	15	0	0	15
QR Code & Ticket Validation	10	0	0	10
Database Persistence &	10	0	0	10

Security				
Payment & Ticket Status Validation	6	0	0	6
Totals	76	0	0	76

4. Execution Highlights

- Service Catalog Form: Test variants validated the source station, destination station, passenger/ticket details, number of tickets, ticket type, payment status, and related field behavior.
- Fare Calculation: Client-side logic was validated to calculate and display the appropriate fare based on the selected journey and number of tickets.
- Flow Designer: Automated processing was validated for requested-item creation, ticket generation, status updates, and related workflow actions.
- QR Code & Ticket Validation: QR-code generation and confirmation logic were tested to ensure the generated metro ticket can be identified and validated.
- Database Persistence & Access: Ticket, station, fare, payment, booking date, expiry, and smart-card-related information was validated for correct persistence and controlled access.
- Overall UAT Result: 76 test cases were executed, with 76 passed, 0 failed, and 0 not tested, giving a 100% execution pass rate.

5. UAT Validation Status

The Metro Ticket Generating System in ServiceNow has completed the defined UAT test execution with all planned test cases passing. The results indicate that the major catalog, automation, ticket-generation, validation, and data-persistence functions operate as expected for the tested scenarios.
