

Project Design Phase
Solution Architecture

Date	31 July 2026
Team ID	Panchumarthi Durga Kosali
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Finding the best tech solution to develop a Metro Ticket Generating System that enables passengers to book metro tickets online through a self service portal. The system automatically calculates fares , generates QR code based e-tickets ,process the digital payments and store travel records.
- Describing the structure Service or catalog portal or catalog item for ticket booking and even the business rules ,Flow designer , client scripts and UI policies to automate business processes and the Dashboard for managing routes,fares , bookings and reports
- Define features, development phases, and solution requirements for the registration and login and source and destination selection and automatic fare calculation , admin management of routes fares and reports and booking history and calculation.
- Provide specifications according to which the solution is defined, managed, and delivered users can register and login securely,select source and destination stations and the system automatically calculates the ticket fare can make payments through an online payment gateway the system generates a unique QR-code e-ticket after successful payment users can receive booking confirmation through email or sms.
